Single patient use only!

Product is not made with natural rubber latex

Why use ear tips for single use only?

Sanibel Supply® recommends using disposable ear tips for single use only to stop ear infections from spreading

At Sanibel Supply® we think that most audiologists would agree with us that it is crucial to avoid inadvertent transmission of disease within the audiology clinic. The good news is that it is quite easy to ensure that ear infections are not spread from one patient to another; use a new ear tip for each patient, and you will significantly reduce or eliminate the incidences of cross contamination.

Cerumen may be an infectious agent

Cerumen is not considered an infectious agent unless contaminated with blood or mucus, and due to its color and viscosity, visual detection of blood or ear discharge contaminants may be difficult. Therefore, you should treat cerumen as a potentially infectious agent. It is especially important to be mindful of using new tips when testing children and those with weaker immune systems, such as the frail and elderly as they are more susceptible to infections.

Are disposable ear tips expensive?

Sanibel Supply® offers volume discounts on ear tips. This will often offset the time and cost involved in the ear tip cleaning process.

Be more cost effective in your clinic

By using a new ear tip pr. every patient, you reach a seal much more reliable than with re-used ear tips. How often have you not been fumbling for minutes before you get a seal with a patient? Using the right ear tip and a fresh one pr. patient ensures you a reliable fit with every patient, meaning you can calculate less minutes for testing a patient and in most cases allow you to have an extra patient pr. day without having stressed out personnel. The cost of using one ear tip pr. patient is far less than what you earn on your next patient, plus you can promote your clinic as taking patient safety and hygiene seriously.

6 strong reasons why you should use a new ear tip after each patient:

1

You reduce the risk of cross contamination between your patients

Unfortunately, it is not possible to be 100% certain that complete decontamination has taken place when cleaning ear tips.

2

You minimize the risk of non-sealing ear tips

Ear tips degrade over time, which can make it more difficult to attain a good seal, hence leading to less accurate results.

3

Your patients avoid allergic reactions from cleaning agent residue

Residue from cleaning agents may cause allergic reactions in some patients.

4

Your patients will appreciate it

Patients feel safer and are more comfortable knowing that new ear tips are being used.

5

It's so much easier

Cleaning ear tips takes time, so why not give your staff the time to do what really matters?

6

It's so much faster

A fresh ear tip creates a seal quicker and more reliable, so you do not waste time performing a standard procedure.

Selecting the correct ear tip

Age	Ear tips inserted against ear canal	Ear tips inserted against entrance of ear canal			Ear tips for Echo-Screen®	Ear tips for AccuScreen®
0.5 y/o		 Green, pediatric			 4.0 mm, ANA	 3.7 mm, AOT
					 4.5 mm, ANA	 4.0 mm, AOT
		 3-5 mm, flanged	 3-6 mm, green	 6 mm, green	 5.0 mm, ANA	 4.5 mm, AOT
	 7.5 mm, umbrella	 4-7 mm, flanged	 6 mm, yellow		 infant tree, ANA	 5.0 mm, AOT
	 9 mm, umbrella	 5-8 mm, flanged			 mushroom, ANA	 4-7 mm, AOT
	 10 mm, umbrella	 7 mm, mushroom	 7 mm, red	 7 mm, yellow		
	 11 mm, umbrella	 8 mm, mushroom	 8 mm, blue	 8 mm, red		
	 13 mm, umbrella	 9 mm, mushroom	 9 mm, green	 9 mm, blue		
		 10 mm, mushroom	 10 mm, yellow	 10 mm, green		
	 15 mm, umbrella	 11 mm, mushroom	 11 mm, red	 11 mm, yellow		
10 y/o		 12 mm, mushroom	 12 mm, blue	 12 mm, red		
Adults	 19 mm, umbrella	 13 mm, mushroom	 13 mm, green	 13 mm, blue		
		 14 mm, mushroom	 14 mm, yellow	 14 mm, green		
		 15 mm, mushroom	 16 mm, red	 16 mm, yellow		
	 22 mm, umbrella	 19 mm, mushroom	 18.5 mm, blue			

Selecting the correct size of ear tip takes practice

In general, flanged or mushroom-shaped ear tips will be used for most testing (Impedance, DPOAE, TEOAE and Automated ABR).

Sometimes, an umbrella-shaped ear tip will be used for performing a quick impedance screening.

The table can be used as a guide to help you select the appropriate ear tip size.

Disposable Sanibel™ ADI ear tips

For use with the following acoustic immittance instruments and otoacoustic emission systems with CLEAR probe tip: **Amplivox**: all Otowave versions. **Interacoustics**: Titan, AT235, AA220, Eclipse, MT10, Sera, OtoRead II. **MAICO**: easyTymp, touchTymp MI 22, MI 23, MI 24, MI 26, MI 34, MI 44, easyScreen, EroScan Plus,

ABR

OAE

Save time pr. patient, earn more money and help more patients!

Use a fresh ear tip pr. patient and be sure to reach a seal right away, when inserting the ear tip. A fresh ear tip contains the optimal conditions for reaching a seal when inserting it into the patients' ear, whereas a multi-used one often will

cause you trouble and delay you in your process. By allowing yourself to plan less time pr. patient for testing, you can see more patients pr. day. That is worth much more than cleaning an ear tip, both for your clinic and your patients.

Sanibel™ Probe Tube Removal Tool

- A = Probe
- B = Probe Tube Installer
- C = Attachment to probe cable
- D = Tube Remover

To Remove a Probe Tube

1. Place the front hole of the Probe Tube Tool over the end of the probe, as shown. The probe should be seated against the face of the tool and snap in place.
2. Squeeze the tool closed and hold it.
3. Twist the tool a couple of times while holding the tool closed and pulling away from the probe.
4. The probe tube will pull out from the probe. Discard the probe tube.

To Install a New Probe Tube

5. Place a new tube into the hole on the top of the tool.
6. Align the probe with the tube.
7. Push the probe onto the probe tube until the probe contacts the face of the probe tube tool and a snapping sound is heard.
8. Slide the tool off, leaving the tube in place in the probe.

ABR

Sanibel™ Infant EarCup™ with snap or tab electrodes

Reduce test time! Test on both ears in one screening. Compatible with Titan™, Eclipse™, AccuScreen® (1st generation), MB II Classic and Echo-Screen®. Use only with equipment calibrated for over-ear style disposables. Disposable over-the-ear earphones are high quality, low cost, and ideal for bilateral newborn hearing screenings. 1 set consists of 2 Infant EarCups™, 3 snap or tab electrodes and 1 alcohol pad.

For use with a range of different providers of newborn hearing screening equipment:

Grason Stadler: Novus. **Interacoustics:** Titan, Sera. **Maico:** easyScreen, MB II Classic.

Madsen/Otometrics: Accuscreen. **Natus:** Biologic Abear, Echo-Screen.

Use Sanibel™ probe tubes for any equipment

We often hear from the industry that only the manufacturers' specific probe tubes should be used with their specific equipment. However, a recent comparative study by Sanibel Supply® disproves this myth.

In this study, our in-house audiologists and engineers compared the effects of different probe tubes on an Affinity^{2D} system. They compared AudioScan tubes (red), Otometrics tubes (blue), Sanibel™ tubes (orange) and Sanibel™ tubes (grey).

This involved running each tube via the 'tube calibration' process and then comparing the following REUG curve when the tube had been left in the calibration position.

The investigation showed no significant difference in the REUG curve and all probe tubes achieved the same result when the calibration process had been run correctly.

HIF

Sanibel™ REM probe tubes, type A

Universal fit, length 76 mm, beveled 45° angle tip and black marker ring.

Part no.	Unit
8104116	Tray/50 pcs

HIF

Sanibel™ REM probe tubes, type B

Fit all brands, **Interacoustics**, **Natus Aurical**, **MedRx** and **AudioScan**.

Cerumen Management accessories

Bionix® Safe Ear Curettes

Bionix® Safe Ear Curettes allow healthcare providers to safely and gently remove cerumen with styles to match different types of wax and personal preference. Bionix® Safe Ear Curettes are flexible, to reduce injury to the ear canal, making them safer than stainless steel curettes. Seven color coded tip styles to meet specific needs, giving you “the right tool for any job” for every cerumen situation. Also available as a variety pack.

Part no.	Description	Unit
8515585	Green MicroLoop®	50 pcs/box
8515586	Orange ControLoop®	50 pcs/box
8515587	Red AngleLoop®	50 pcs/box
8519359	Purple VersaLoop®	50 pcs/box
8519360	Blue InfantScoop®	50 pcs/box
8519372	Yellow CeraSpoon®	50 pcs/box
8519361	White FlexLoop®	50 pcs/box
8519362	Variety Kit, (10 each style & 15 white)	

Bionix® Lighted Ear Curettes

Bionix® Lighted Ear Curettes combine illumination and magnification to help healthcare providers take less time to see and safely remove cerumen from the ear canal. The Lighted Ear Curette with magnification brilliantly illuminates the ear canal, eliminating the practice of blindly curettaging the sensitive area. Complete visualization shortens procedure time and increases efficacy. Box of 50 pcs.

All versions include 1 Light Source and 1 magnifying lens.

Part no.	Description
8519364	Lighted AngleLoop®, 4mm diameter
8519365	Lighted MicroLoop®, 3mm diameter
8519366	Lighted WaveCurette™, 2.5mm wide tip
8519367	Lighted FlexLoop®, 4mm wide tip
8519368	Lighted CeraSpoon®, 4mm wide tip
8519369	Lighted InfantScoop®, 2mm wide tip
8519373	Lighted VersaLoop®, 3mm wide tip
8519370	Lighted CeraPik™, 2.5mm concave tip. Great for hard, impacted cerumen and foreign bodies.

Lighted Ear Curette Variety Pack

Part no.	Description
8519363	With 1 light source and magnifying lens includes all tip styles except CeraPik™.

Lighted Forceps

Bionix Lighted Forceps combine illumination and magnification to help healthcare providers take less time to see and safely remove ear canal and nasal passage obstructions.

Part no.	Description
8519392	10 forceps, 1 light and 1 magnifying lens

OtoClear® Spray Wash Kit

OtoClear Ear Irrigation system gently directs water to the ear canal wall with three divergent streams, instead of directly at the Tympanic Membrane.

Part no.	Description
8519371	kit of 20x irrigator tips, 1x 470ml spray wash bottle, 1x ear basin
8519390	Otoclear Ear Basin, Box/3 pcs

Otoclear Irrigation Tips

Bionix OtoClear Ear Irrigation helps provide safe and comfortable ear irrigation without the backsplash, at half the cost of a self-constructed device.

Sanohra Earplugs - Swim

Sanohra Swim earplugs, suitable for children and adults. Prevent water from getting into the ear canal and protect ears when exposed to water.

Part no.	Description	Unit
8519353	EarPlugs Swim Kids, EN	1 set
8520143	EarPlugs Swim Adult, EN	1 set

SANOHR fly ear plugs

Beyond "noise protection" it can be important to protect the ear drum (tympanic membrane) from changes in external pressure that are too rapid, e.g., during take off and landing phases in airplanes. For airplane passengers experiencing a problem with the pressure equalisation, the use of a special ear protection product means freedom from an unpleasant feeling or piercing pain during flight.

SANOHR swim ear plugs

In case of injury to the ear drum or insertion of a vent tube, it is necessary to prevent water from reaching the ear drum through the outer auditory canal. Swimming, bathing or showering might cause inflammation of the middle ear. Staying in chlorinated water for an extended period of time can cause the skin in the outer auditory canal to swell and cause inflammation (otitis externa).

Disposable electrodes

Large, soft
electrode size!

60 pcs

ABR

Sanibel™ snap electrodes

Pre-gelled with a very gentle hydrogel, perfect for ABR testing on infants. Size 2.2 x 3 cm. Item no. 8107137 is packed in 20 smaller pouches of 3 electrodes. Intended use areas: Newborn, diagnostic follow-up, ABR, C-Vemp.

ABR

Ambu® Blue Sensor™ N-10-A

Foam ECG electrode with 10 cm wire and 4 mm connector, for use with universal electrode cable. Wetgel.

Part no.	Unit
8500670	Bag/25 pcs

Surface electrodes tailored to your need

At Sanibel Supply® we believe that it is important to choose the correct surface electrode for each specific recording and patient type.

Wetgel or hydrogel electrodes?

A wetgel electrode consists of water, thickener, ionic salts, surfactants and bactericides or fungicides. Wetgel migrates easily and rapidly onto the skin surface, reducing impedance levels, which in turn will generally result in lower noise in the recording.

A hydrogel surface electrode is less adhesive when compared to wetgel, making it particularly suitable for newborns.

Chloride salt concentration

The higher the chloride salt content, the more conductive the electrode. Higher salt content (10% and above), pre-gelled surface electrodes are useful for making fast, high quality measurements of biopotentials. High conductivity electrodes generally have reduced artifact, due to the lower impedance generated between electrode and skin surface. As the chloride salt content drops, there is a corresponding reduction in electrode conductivity.

If the chloride content is below 10%, the electrode can then be employed for longer recording times, with a reduced risk of skin irritation. As a rule of thumb, wetgel has a chloride content of 10% and hydrogel 4%.

It is important to use electrodes with similar chloride salt content when testing.

The impedance of the electrode/skin junction is highly dependent on the electrolyte type and the chloride salt concentration. For example, a hydrogel electrode with 4% chloride concentration will have approximately 10x higher impedance than a wet liquid gel electrode with 10% chloride concentration, after first application to the skin.

Adhesion

An advantage of a conductive adhesive is that the active surface can be as large as the electrode itself because no additional adhesive strip is needed. The Sanibel disposable electrodes come with a range of adhesive qualities. All electrodes are designed to adhere well to skin surfaces, but

the adhesion characteristics can be grouped according to the application:

- Strong adhesive
- Moderate adhesive

Strong adhesion is not recommended for newborns.

Skin preparation

For optimum electrode to skin conductivity, the skin should be lightly brushed with a gentle abrasive gel/wipe. **An alcohol wipe is not recommended to improve conductivity as this will only dry out the skin surface.**

ABR

Sanibel™ ECoG starter kit

For Eclipse™ and Bio-logic® AEP system.
Includes cable, gel and 2 pcs TM electrodes.

Part no.	Unit
8013209	Set/4 pcs

8515554	Extra large	Box/100 pcs

Disinfection gel and wipes

Easy disinfection of skin and surfaces

Part no.	Description	Unit
8522407	Dax Alcogel 85	600 ml
8520146	Wipes canister	30 pcs

Infection control

A clean clinic is also part of your professional image

Infection control is so much more than cleaning probe tips, protecting your personal computer's keyboard, and maintaining high standards within hygiene using e.g. disinfectant detergent for a quick and extensive disinfection of non-invasive medical devices.

When it comes to infection control, preventing germs, dirt and dust from spreading via other sources, is also of critical importance – both to the safety of

your patients and yourself! Gloves, shoe covers, facemasks, and aprons are just some of the "accessories", which can help you succeed in this.

Maintain high, professional standards and make your clinic an ever-safe environment for your patients, making the wearing of gloves, facemasks and other body protection wear a natural part of the "patient interaction" process.
